The following comments were received on the draft rule text for 10 CSR 10-2.210 Control of Emissions From Solvent Metal Cleaning.

---

**Comments on 10 CSR 10-2.210 draft rule text via email from the National Nuclear Security Administration's Kansas City Plant on January 9, 2007.**

The draft rule to amend the Control of Emissions From Solvent Metal Cleaning in the Kansas City area has been anticipated. Numerous aspects of the codified rule needed to be updated and clarified. The draft rule is easier to understand with the applicability, exemption and definition sections at the beginning of the rule. The equipment specifications and operating sections have also been enhanced and clarified. The need to list exemptions as well as clarify and add definitions was definitely needed. This rule was modeled after the St. Louis area rule. Industry members from the Kansas City and St. Louis area participated in the development of this regulation. No negative comments on the draft regulation only positive support.
